Memorandum:

Subject: National Airlines is Proud to introduce our Newest Arrival

National Airlines has acquired an Airbus A330 on operating lease from Air Lease Corporation (ALC) and it is now on our certificate and available for commercial sale. The aircraft, A330 with MSN 1016, bears U.S. registration of N819CA, and is fully compliant with US regulations.

The A330 provides a multi-faceted solution to National Airlines expansion plans that perfectly matches the requirements of its core business partner, the commercial aviation division of the Department of Defense. The A330 will also provide for a superior product for sports team charters, as compared to other aircraft platforms that have been proposed and used in the past.

The A330 offers a 21st century cabin interior with a lower cabin altitude, 4th generation IFE and USB ports at each seat, which will provide our guests with the most comfortable and relaxing experience in the air. The A330 cabin is ideal for further customization solutions that can fit our specific customer needs, enhancing the travel experience.

Another important consideration while traveling in today's conditions is that the A330 has High Efficiency Particle Arrester (HEPA) filters that remove 99.97% of all small particulate matter, providing purest air through gaseous filtration. This provides air to the aircraft at the right level of temperature, pressure, oxygen, humidity and quality. The air is recycled in the cabin every 3 minutes, resulting in an exceptionally clean and pure passenger environment.

Our present configuration of 290 seats will provide 150 seats in a 'socially distance' configuration with at least one open seat next to each occupied seat if needed.

With the introduction of the A330, National Airlines has been able to recruit some of the finest pilots and flight crewmembers from around the world with many years of experience. Our Captains average over 4,000 hours and First Officers over 2,750 hours in type experience, and our Cabin Attendants are some of the finest and most professional in the industry, with years of long-range international service.

National Airline's business model addresses unique and varied market situations. Our ability to adapt to a changing environment with an agile way of operating is the reason for our success. Should a business partner so desire, we have the ability to operate your A330 with our operational support staff to offset the costs associated with the ownership of a modern, state-of-the-art aircraft. This is a natural business structure for us and is one of our core competencies. We look forward to being of service.

Welcome aboard our A330-200!

National Airlines Team
